

California OES Weather Threat Briefing

Thursday Evening, December 24, 2021
8:00 PM PST

Day 1 (Thursday Evening-Friday): Periods of heavier rain will continue across much of coastal southern California overnight through midday Friday, where some flooding is possible for both rivers and streams as well as burn scars. Heavy snow will also persist across the Sierra and northern California mountains, mainly above 3,000 feet.

WEATHER KEY POINTS

12/23/21 - 12/29/21

Thursday Evening - Wednesday

- Stormy weather will continue across much of the state through the holiday weekend, with several additional rounds of rain and mountain snow expected and a few thunderstorms at times for Coastal and Southern Regions through Saturday
 - 3 to 6 feet of additional snow are forecast over the Sierra through Monday, with even higher localized amounts likely. Snow levels will range from either side of 2,500 feet across far northern California to between 3,000 and 4,500 feet over the Sierra, with levels dropping further through late weekend and early next week
 - Some lower elevation snow could occur down to or even below 1,000 feet by later in the weekend and early next week across northern California
 - Locally heavy rainfall will continue across coastal southern California through midday Friday, with some flooding of rivers, streams, and urban areas possible. Some burn scar flooding is also possible, particularly in and near the **Alisal, Apple, Bobcat, Bond, El Dorado, and Palisades Fires**
 - Strong and gusty winds will continue across many higher elevation locations through Monday, with gusts of 40 to locally 60 mph bringing additional impacts from blowing snow, particularly across northern California, and also possibly producing some minor tree damage
- Additional storms could bring additional precipitation to the state into much of next week, though the exact details on timing and amounts of precipitation remain uncertain at this time
